

Remember, you're not just fertilizing your lawn

Fertilize sparingly and caringly

Green your lawn, not the lake

Storm drains found in our streets and yards lead directly to our lakes and streams. So, fertilizer from your lawn can easily end up in our water. This fertilizer can form large algae blooms and use up oxygen fish and other aquatic insects need to survive.

What can you do? Simple.

- Sweep fertilizer off of driveways and sidewalks and back onto your lawn.
- Recycle grass clippings by leaving them on your lawn.
- Use fertilizer with no or low phosphorus.
- Select a slow-release fertilizer where at least half of the nitrogen is water insoluble (check the label).

Keep the green on the lawn and in your pocket
